

AN OPEN LETTER TO THE FEDERATION INTERNATIONALE DE L'AUTOMOBILE

20 August, 2020

JEAN TODT

President

FEDERATION INTERNATIONALE DE L'AUTOMOBILE

8 place de la Concorde

75008 Paris, France

CC: Dr. Tedros Adhanom Ghebreyesus, Director General of the World Health Organization
Mr. António Manuel de Oliveira Guterres, Secretary General, UNITED NATIONS

Re: STOP Tobacco Sports Advertising and Sponsorship

We, members of civil society, earnestly call on you to put an end to all tobacco advertising and sponsorship in Formula 1. The sport represents one of the last vestiges of Big Tobacco's global marketing to lure young people into addiction through sports. Continued tobacco sponsorship in Formula 1, and the promotion of tobacco company's brands, either directly through brand stretching and extensions,¹ on and off the track is a violation of public health laws and United Nations (UN) norms.

Federation Internationale de l'Automobile's (FIA's) continued tolerance of this situation defies good governance and is inconsistent with the commitments the FIA has made to UN global road safety and climate change initiatives.

Complicity in Marketing to Youth

A [recent report](#) revealed that Philip Morris International (PMI) and British American Tobacco (BAT) spent almost \$100 million in 2019 and will spend \$115 million in the 2020 season to target Formula 1's 500 million global fans. PMI and BAT are pursuing a global campaign to present themselves as "transformed" in order to sell more of their harmful and addictive products. Tobacco brands on the racetracks stream across borders via multiple media channels and through computer games into the youth's consciousness. The sport has the second-highest proportion of fans under age 25 of all global sports [leagues](#). FIA's failure to remove tobacco advertisements and messaging from the sport could make it complicit in tobacco company marketing to youth.

Complicity in Violating Cross Border Advertising & Sponsorship Bans

It has been nearly 20 years since the FIA made its initial commitment to wean itself off tobacco money. Since then, significant progress has been made to stop the tobacco epidemic. A total of 182 countries have ratified the World Health Organization Framework Convention on Tobacco Control (WHO FCTC) mandating a comprehensive ban on advertising. WHO FCTC implementation has become engrained in the UN Sustainable Development Goals (UN SDGs). Tobacco companies have been found guilty of fraud and racketeering. A majority of governments, including countries hosting F1 races, have banned sports advertising² and governments have held the tobacco industry liable for violating laws through Formula 1 ads. FIA's continued failure to take responsive action to prevent violations could make it complicit with the tobacco industry.

Failure to Take Responsibility Despite Being Called Out by WHO

Last year, the WHO particularly called out Formula 1 on continued engagement with the tobacco industry, but the FIA provided only patronizing and dismissive responses³. FIA's failure to take responsibility and hiding behind a legal cloak is uncharacteristic of an organization that promotes sports integrity⁴. Simply asserting that it has no control over the sport participants' actions is a lame excuse that can easily be used to escape liability; and is a shameful response to be taken by a sports governing body. Turning a blind eye on a moral or legal wrong breeds corruption. If FIA's rules allow for teams to run on money gained from selling products that kill millions, then it should change the rules. It is not deserving of its governance position unless it does so.

Inconsistency with Climate and Road Safety Commitments

FIA's global commitments start to ring hollow despite your initiatives as UN Special Envoy for Road Safety, and efforts to sign Formula 1 up to join the UN Sports for Climate Action Framework⁵. FIA's commitment to protect the planet and promote safety is a sham if it continues to be a vehicle for tobacco sponsorships that contribute to killing people and destroying the planet.⁶ Even if FIA manages to reduce Formula 1's 256,551 tons of carbon footprint (2019), it continues to contribute 845,000 tons of cigarette butts per year. This staggering amount of waste kills animals, pollutes land and sea, slows sustainable consumption and undermines the basic principles of the UN framework.

Inappropriate Engagement with the UN

The UN specifically recognizes the fundamental conflict of interest between the tobacco industry and public health, which is incorporated in the UN SDGs. A resolution of the UN Economic and Social Council (ECOSOC) urged agencies of the UN System to reject partnerships with organizations furthering tobacco industry interests. Rather than aligning with the UN, FIA is, in effect, furthering the tobacco industry's interests by receiving annual payments from teams funded by tobacco companies; and allowing the teams to advertise tobacco company brands and messages.

Driving Past Addiction and Toward Health

As you know, the Olympics, which recognized FIA in 2012,⁷ is tobacco-free.⁸ All other major global sports series have ended tobacco sponsorships. FIA represents the last major hurdle to complete a sweeping change that shows tobacco has no place in sports.

No matter what they say, tobacco companies are still responsible for 8 million deaths and USD 1.4 trillion in economic losses annually. It is shameful that Formula 1 has made USD 4.4 billion over the years from tobacco companies culpable for this disaster. FIA must put a stop to this and prevent complicity in violating laws and UN standards.

We are confident that as a UN Special Envoy, you fully comprehend the values of the UN, and recognize your duty to drive the FIA towards sustainable development by ending tobacco industry advertisement and sponsorship in Formula 1.

We look forward to supporting you in this endeavor. You may reach us through Ms. Bungon Ritthiphakdee (bungon@ggtc.world), Executive Director of the Global Center for Good Governance in Tobacco Control (GGTC), a partner in STOP (Stopping Tobacco Organizations and Products).

Thank you.

Signed

STOP. STOPPING TOBACCO ORGANIZATIONS & PRODUCTS

¹ WHO FCTC COP3 (2008). Guidelines for implementation of Article 13 of the WHO FCTC (Tobacco advertising, promotion and sponsorship). Retrieved from https://www.who.int/fctc/treaty_instruments/adopted/article_13/en/ (accessed 13 August 2020).

Based on the Article 13 Guidelines, “brand stretching” is defined as follows:

22. “Brand stretching” occurs when a tobacco brand name, emblem, trademark, logo or trade insignia or any other distinctive feature (including distinctive colour combinations) is connected with a non-tobacco product or service in such a way that the tobacco product and the non-tobacco product or service are likely to be associated.

Based on a definition from Oxford Languages, “brand extension” means:

... an instance of using an established brand or trademark on new products, so as to increase sales.

For examples of brand stretching and extension, see: WHO FCTC Secretariat (2019). Secretariat of the WHO FCTC urges Parties to ban all forms of tobacco advertising, promotion and sponsorship in all motor sports. Retrieved from <https://www.who.int/fctc/mediacentre/press-release/secretariat-urges-to-ban-tobacco-advertising-in-motor-sports/en/#R1> (accessed 13 August 2020).

“While other transnational tobacco companies seemingly stopped sponsoring Formula One races from 2006, **Philip Morris International (PMI) has been promoting its Marlboro brand of cigarettes since 1997 as Ferrari’s title sponsor**. In 2018, PMI announced the renewal of a long-term partnership with Scuderia Ferrari and launched a “**Mission Winnow**” initiative with a logo that is said to be similar to the Marlboro red-and-white chevron. PMI is also sponsoring team Ducati of MotoGP.

“In February 2019, **British American Tobacco revealed its return to Formula One by announcing a global multi-year partnership agreement with McLaren**, through the “**A Better Tomorrow**” campaign, focused on promoting the company’s new tobacco products, which they refer as “potentially reduced risk products.” (*emphases added*)
